*Level of Assistance 1= Mobile 2= Limited Mobility 3= Not Mobile 4= Not Movable

Mobility Status Factor. Mobility status is based on the capability of each person to take actions necessary for self-protection. The four classes are defined as follows:

- (1) **Mobile.** Capable of readily rising from bed and taking self-protecting actions at approximately at the same rate as a healthy adult. To be classified as mobile, the person must not need assistance in getting out of bed and must be able to open a closed or locked door. Persons shall be considered to be mobile if they are not restrained or in any other way limited in response capabilities so that the type of arousal mechanism that normally would awaken an adult is effective. **THIS IS A PROMPT STATUS.** *All persons are able to evacuate to a point of safety within 3 minutes.*
- (2) **Limited Mobility.** Those persons who have all of the capabilities of a mobile person except that their rate of travel is significantly slower. May require assistance from staff. **THIS IS A SLOW STATUS.** *All persons are able to evacuate to a point of safety within 13 minutes.*
- (3) **Not Mobile.** Persons incapable of removing themselves from danger exclusively by their own efforts. Examples include persons who are totally bedridden; who need assistance getting out of bed or moving; and who are restrained, or otherwise prevented from taking complete emergency self-protection evacuation actions without assistance. **THIS IS AN IMPRACTICAL STATUS.** *All persons are unable to evacuate to a point of safety within 13 minutes.*
- (4) **Not Movable.** Persons incapable of being moved from the room in which they are housed during the course of a fire. Examples include patients attached to life-support systems or involved in medical or surgical procedures that prohibit their immediate relocation without extreme danger of death or serious harm. **THIS IS AN IMPRACTICAL STATUS.** *All persons are unable to evacuate to a point of safety within 13 minutes.*
