DOCUMENT DETAILS			
SUBJECT/TITLE:	Fort Bend County Syndromic Surveillance Report		
AUTHOR NAME(S):	Nicolette Janoski, Debbie Figueroa, Catalina Lozano		
DATA AUTHOR NAME(S)	Debbie Figueroa, Catalina Lozano		
DEPARTMENT NAME:	Epidemiology Division		
DATE OF SUBMISSION:	April 26, 2022		

Syndromes presented in this report are influenza-like illness (ILI), upper and lower respiratory tract infections (URTI, LRTI), enteric, and foodborne. The reports contain the following information:

- Counts of the total number of emergency department or urgent care visits reported through ESSENCE for week 15 of 2022.
- Counts and percentages of the number of emergency department or urgent care visits that meet each individual syndrome criteria for week 15 of 2022.

FORT BEND COUNTY

- No significant increase in the emergency department or urgent care visits was reported for Influenza, LTI, and UTI for week 15 compared to the weeks before in Fort Bend County.
- Syndromic surveillance for influenza-like illness (ILI) in Fort Bend County showed a small increase (8) for week 15 when compared to the previous week.
- Not significant influenza activity was reported in Fort Bend County for week 15, 8 influenza positives were reported corresponding to 6 positive influenza rapid tests (6 Flu A), 2 Culture/PCR+ flu A and no hospitalizations were reported by Fort Bend County sentinel providers for week 15. No influenza-associated deaths have been reported in Fort Bend County for the 2021-2022 season.
- A sustained increase in the emergency department or urgent care visits was reported for Enteric and Food-Borne activity in Fort Bend County for weeks 13-15 compared to the weeks before in Fort Bend County.

TEXAS¹

- Compared to the previous week 14, the percentage of specimens testing positive for influenza reported by hospital laboratories has decreased. The percentage of patient visits due to influenza-like illness (ILI) has decreased. No influenza-associated pediatric deaths were reported.
- The percentage of visits for ILI as reported by ILINet providers decreased to 0.08% in week 14 compared to the previous week.
- The percentage of specimens testing positive for influenza by hospital laboratories in Texas decreased to 2.30% in week 15 compared to the previous week.
